- i) Integrated audio/video capabilities on mobile devices.
- j) Payment Management including on mobile devices.
- k) Advance analytics to measure financial performance.
- l) Multiple language support.

Because they're accessible to patients both at home and on-the-go, IMedical4u apps are a part of the movement towards mobile health programs in health care. There are many varieties of health apps available for purchase from app stores. Some are designed to help consumers make healthier choices in their everyday life by offering advice about fitness or nutrition. Others help doctors and patients communicate from a faraway to their primary care physicians. IMedical4u apps are aimed at physicians with electronic medical records (EMR), allowing doctors to keep accurate records that are easily accessible.
